

Problematic Review Report by Subhagata Chattopadhyay

The review report submitted by Subhagata Chattopadhyay for the PLOS Digital Health article [1] contains notable issues.

Reviewer #2: I see the manuscript is still under construction with several comments within the MS.

I recommend to enrich the literature review with other models. Some are cited below which I recommend authors to cite in their paper.

1. Daneshgar F., Chattopadhyay S. –“A Framework for Crisis Management in Developing Countries”. Intelligent Decision Technologies: an international journal (2011); 5(2): pp. 189-199. DOI: 10.3233/IDT-2011-0106.

2. Ray P., Chattopadhyay S. – “Fuzzy Awareness Model for Disaster Situations”. Intelligent Decision Technologies: an international journal [Special Issue on Intelligent Decision Making in Dynamic Environments: Methods, Architectures and Applications] (2009); 3 (1): pp. 75-82.

3. Li J., Land L.P.W, Chattopadhyay S., Ray P. ‘E-Health Readiness Framework from Electronic Health Record Perspective’. Proceedings of SIG GlobDev Annual Workshop on ICT, Paris, France October 14-17 (2008) URL: <http://www.globdev.org/dev/files/9-Paper-Li-E-Health-Readiness-Revised.PDF>.

I recommend the authors to resubmit the paper after addressing the internal comments and discussing other models, mentioned above.

Rather than providing any specific comments on article [1], Chattopadhyay merely suggested three references for the authors to cite. Of these, the authors included two in their final manuscript.
